Theobroma

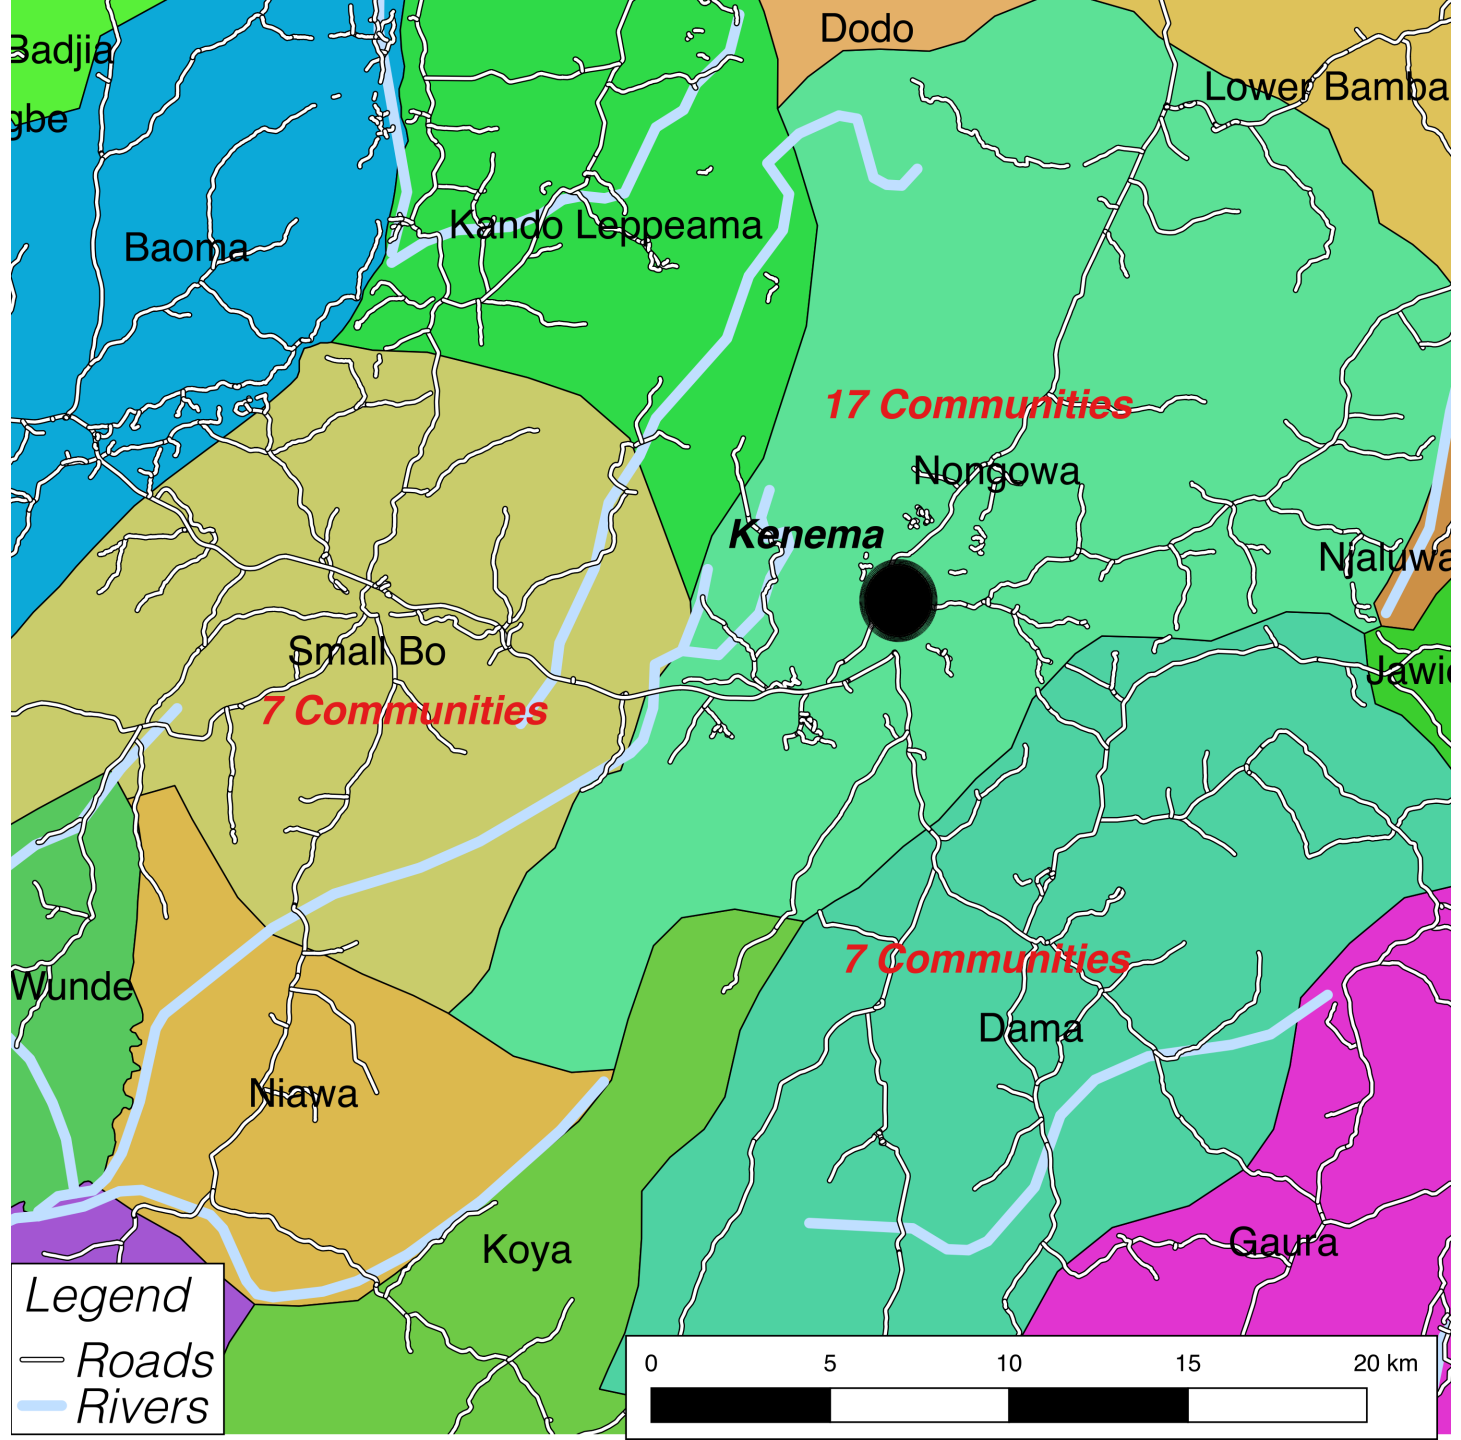

Introduction

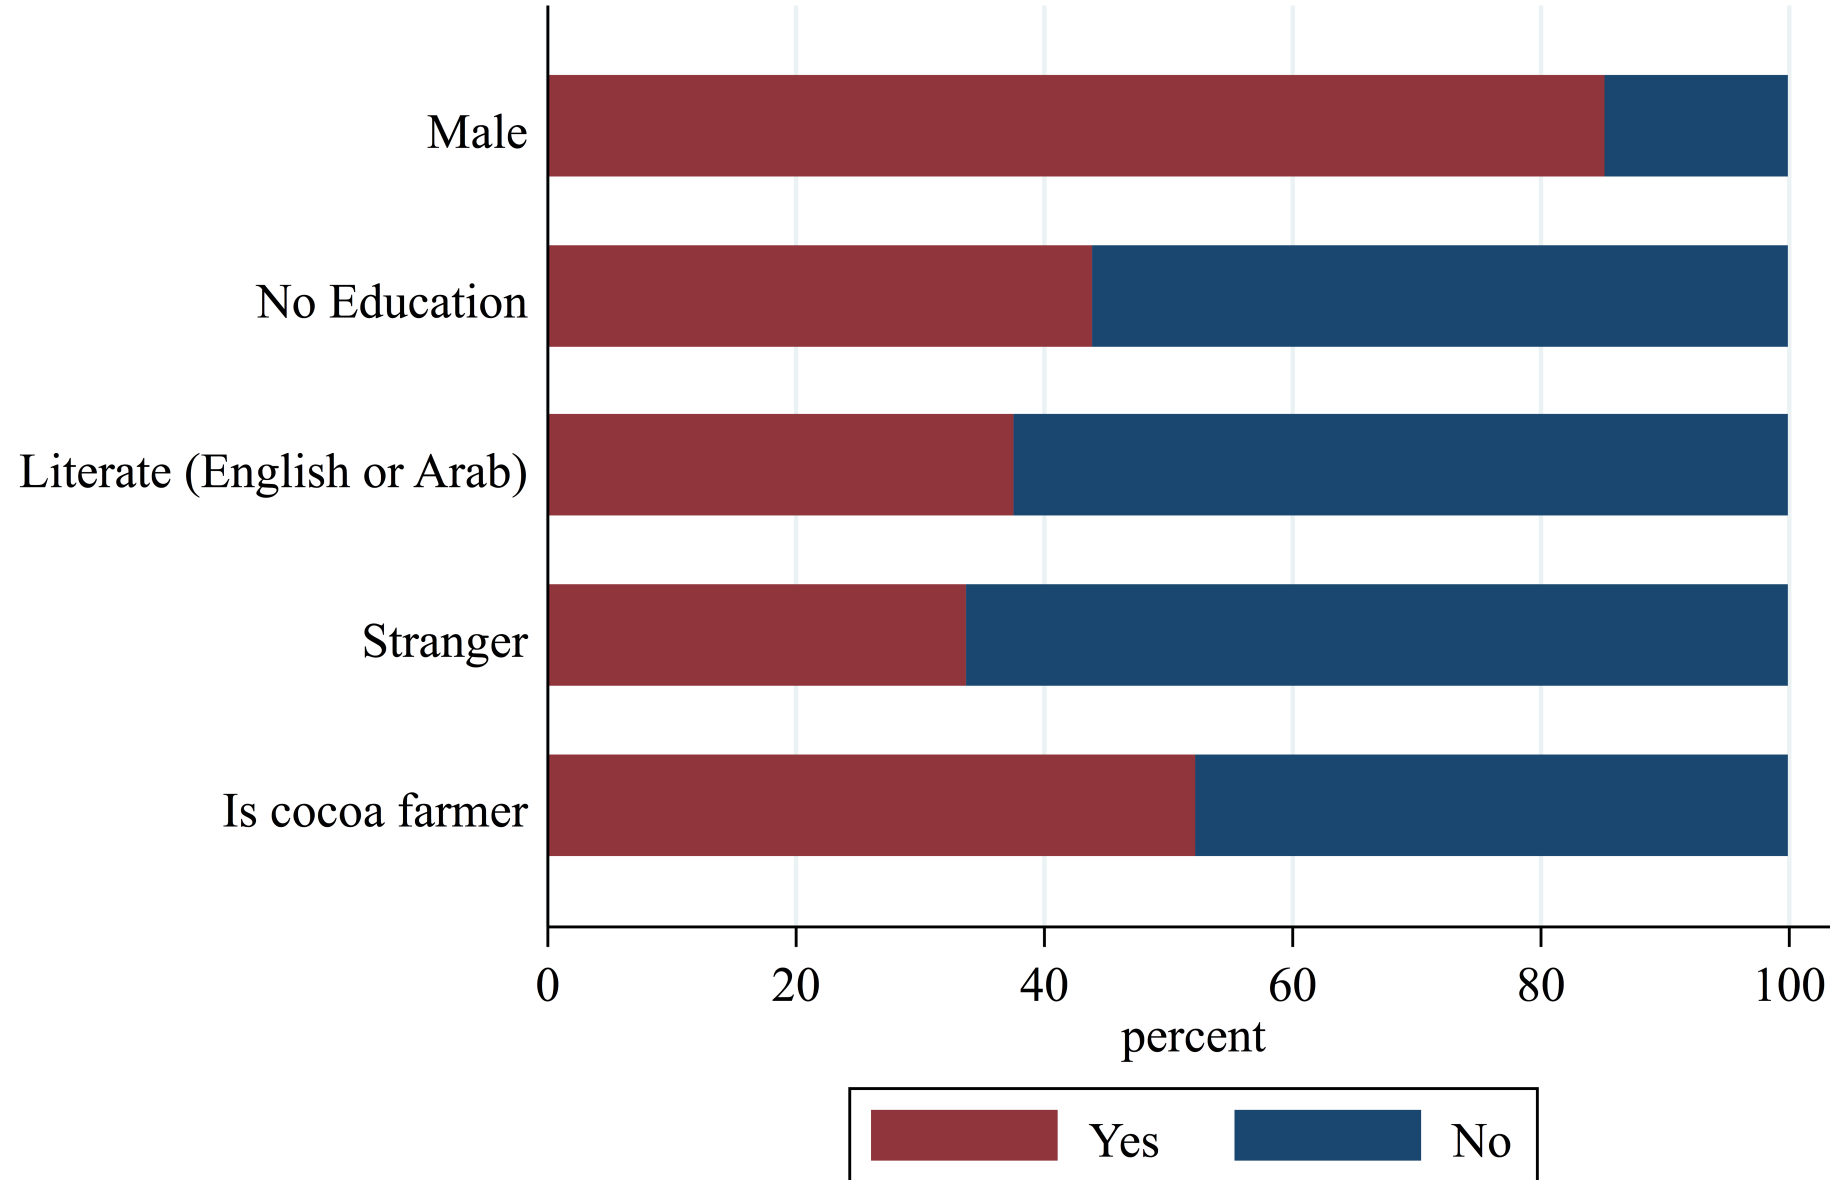

- Collaborative research project with Wageningen University, Njala University, Theobroma, Agroproduce Management Services
- Impact evaluation of a Plantation in the Kenema area.
- This presentation:
 - Data Description
 - Data on Cocoa farming
 - Exploratory analysis on Black Pod Losses

The data

- Collected April this year
- Quantitative data from 31 villages
- 45 randomly selected heads of household per village
- Self-reported data
- Farmer-level data on Cocoa farming, Yields, Losses and Marketing
- Almost 1400 farmers

Descriptive statistics

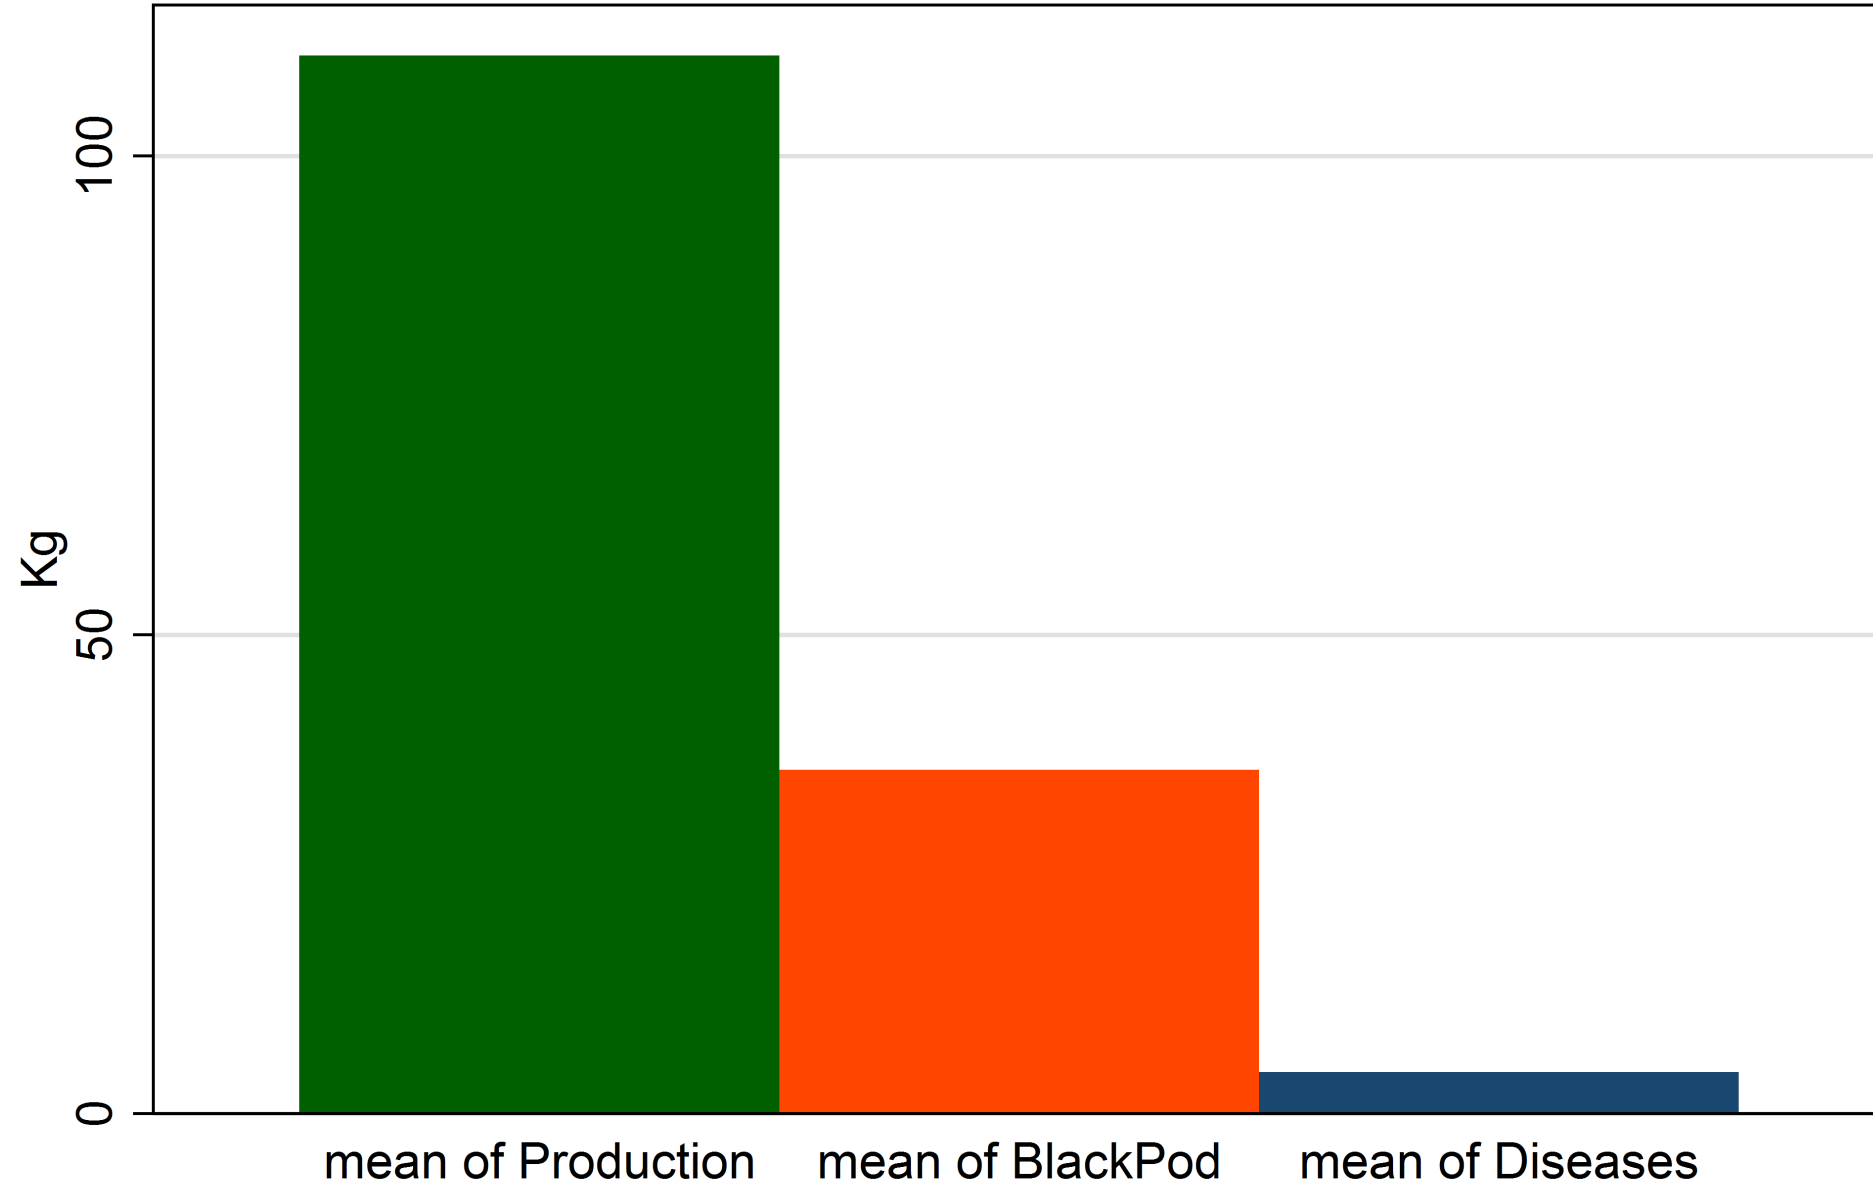

N=1346

Descriptives

| | N | Mean | Standard Deviation |
|--------------------------------|------|------|-----------------------|
| Age | 1343 | 43.4 | 13.8 |
| # Children in the household | 1346 | 3.31 | 2.37 |
| Total size of farms (Ha) | 1340 | 2.88 | 2.84 |

Production and Losses of Cocoa Farmers

N=613

Yield (Kg/Ha)

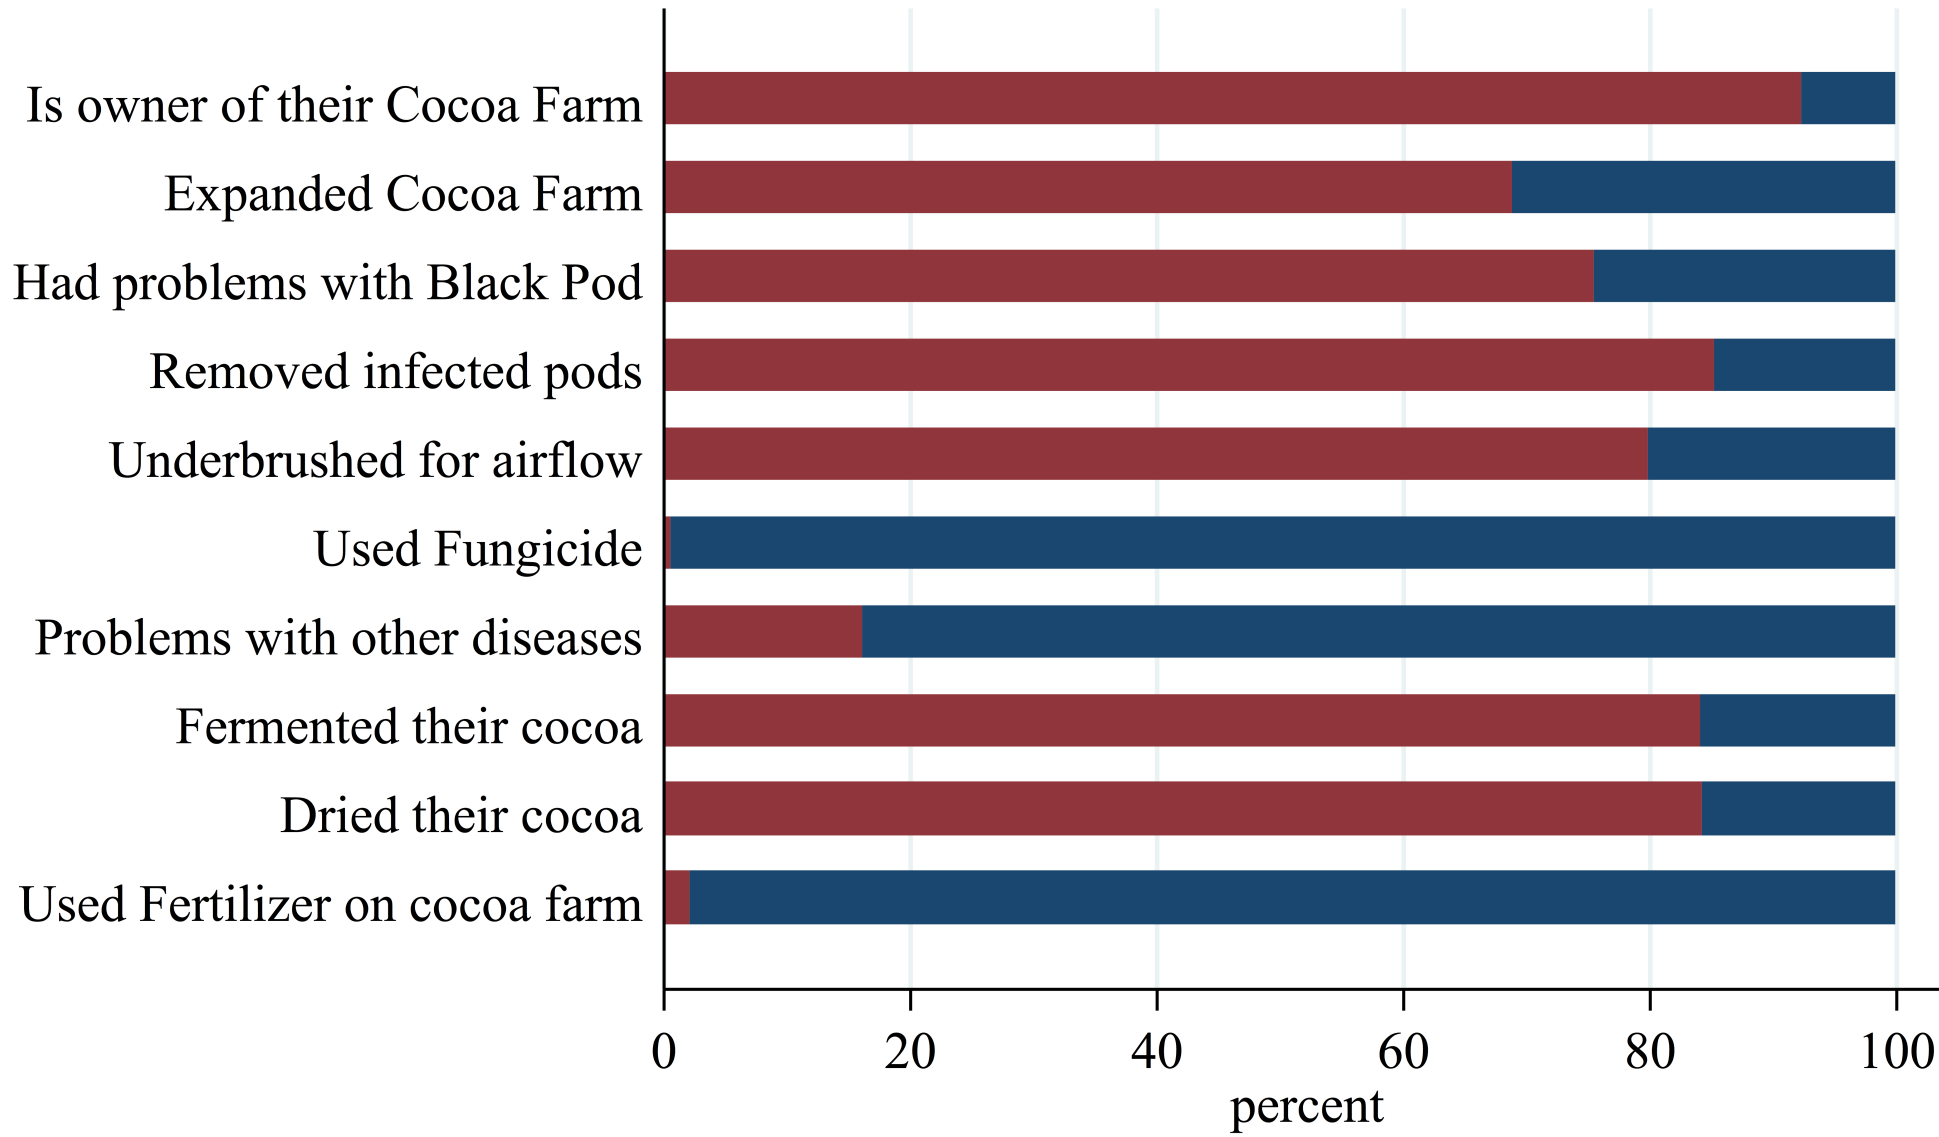

mean of SierraLeone

mean of Ghana

N=538

Cocoa Farming

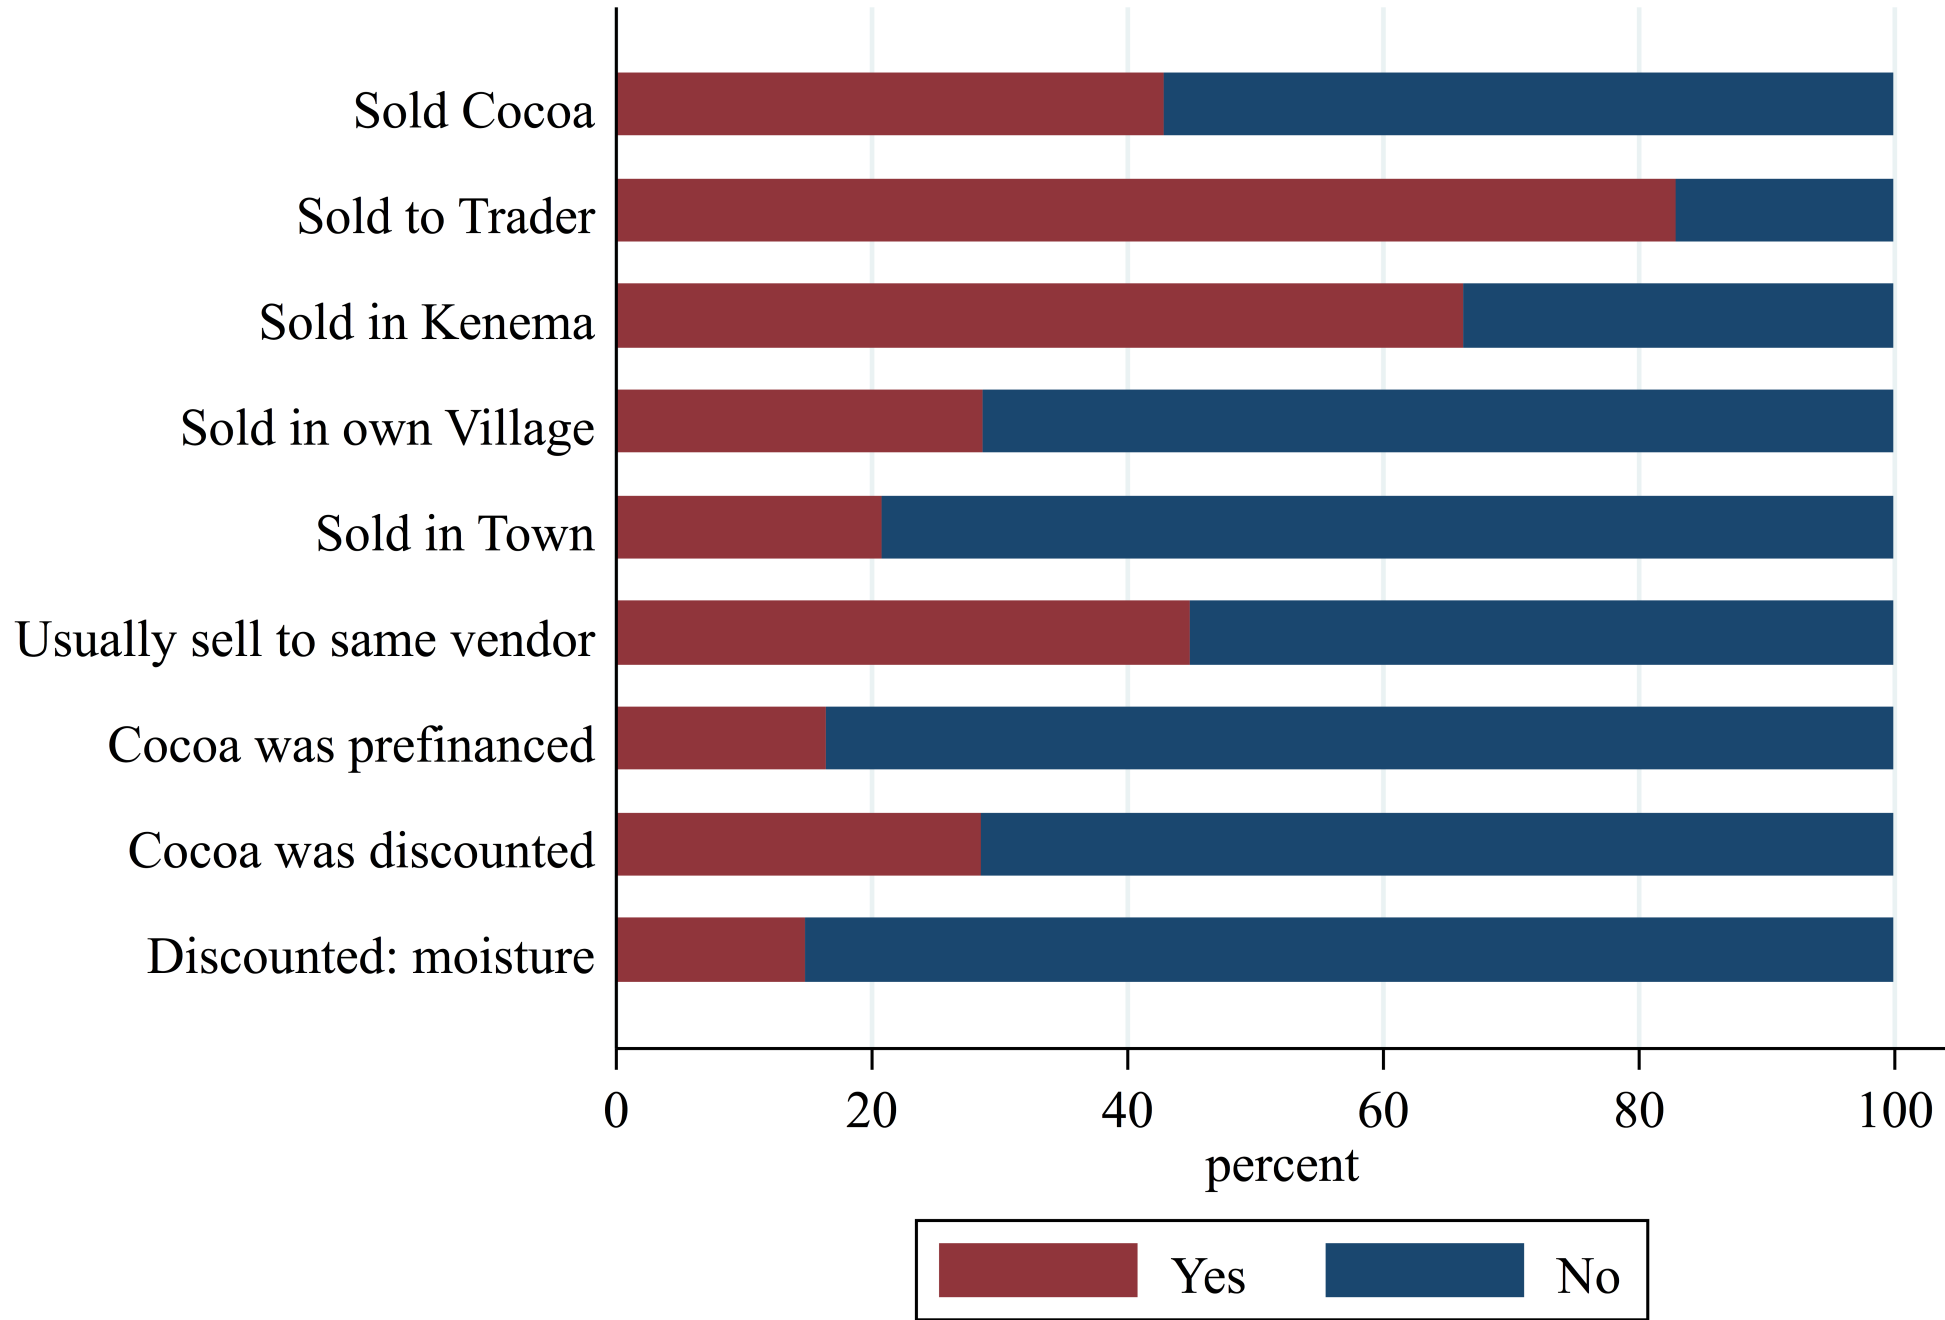

N=702

Cocoa Farming

| | N | Mean | Standard Deviation |
|-----------------------------------|-----|-------|--------------------|
| Size of cocoa farm (Ha) | 702 | 1.59 | 1.81 |
| # days work on cocoa farm in 2015 | 638 | 77.9 | 73.9 |
| # of seedlings expanded with | 454 | 275.5 | 359.8 |
| % shade cover | 695 | 51.6 | 17.3 |
| # Times brushed in 2015 | 700 | 2.64 | 2.05 |
| # days fermented | 569 | 4.73 | 1.64 |
| # days dried | 569 | 4.84 | 1.50 |
| Age of cocoa farm | 529 | 10.7 | 10.0 |

Cocoa Marketing

Cocoa Marketing

| | N | Mean | Standard Deviation |
|---|-----|-------|-----------------------|
| Price received for 1 kg of cocoa (in 1'000 Le) | 532 | 10.1 | 11.3 |
| Earnings from cocoa in 2015 (1'000 Le) | 659 | 536.6 | 846.1 |

Predicting Black Pod Losses

- Exploratory: can we characterize farmers with low losses?
- Very preliminary: a research, not policy recommendation

Predicting Black Pod Losses (Kg/Ha)

| Variable | Effect | Standard error |
|------------------------|--------|----------------|
| Farm Size (Ha) | -9 | 2 |
| Farm Age | +0.6 | 0.2 |
| Cocoa Price (1'000 Le) | -0.3 | 0.1 |
| Mean Black Pod Losses | 24 | |

Tobit Regression. N=406, Robust standard errors clustered at the village level (# clusters=29). All variables significant at the 5% level or higher.

All other variables shown so far were insignificant or unstable

Conclusion

- Cocoa important for many farmers
- Yields are low compared to Ghana
- Losses to Black Pod high, despite high knowledge of prevention measures
- Farmers travel to sell their cocoa
- Big and young farms have fewer problems with Black Pod
