RESEARCH PROGRAM ON Policies, Institutions, and Markets

Led by IFPRI

Policy research for a food secure present and future

Technological Innovation and Sustainable Intensification

Agricultural Growth and Rural Transformation

Inclusive and Efficient Value Chains

Social Protection for Agriculture and Resilience

Governance of Natural Resources

Cross-cutting Gender Research and Coordination

PIM is led by the International Food Policy Research Institute (IFPRI) with contributions from all 15 CGIAR Research Centers and 3 external managing partners: Michigan State University, Wageningen University and Research Centre, and World Vision International.

Together with other CGIAR research programs, we contribute to all Sustainable Development Goals, with more focus on:

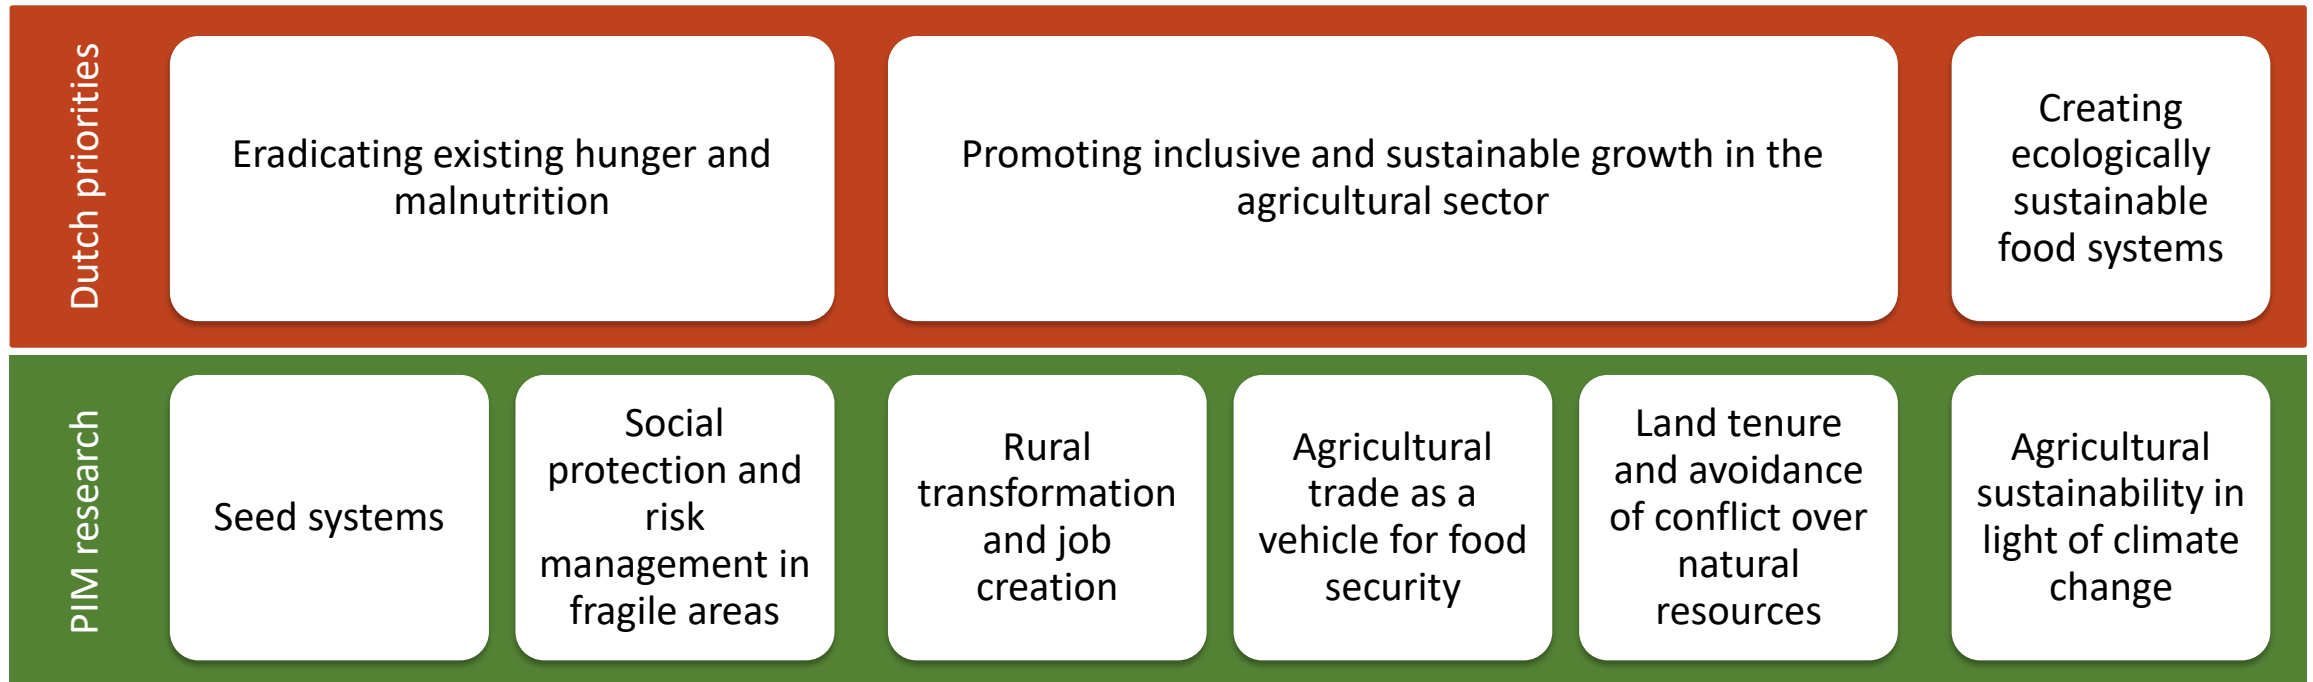

PIM in the NL-CGIAR strategic partnership

Primary contribution:

- Sustainable agri-food value chains and sectors
- Gender equity

Additional overlap with **Dutch Global Food Security Priorities:**

Some actionable big-picture findings from 2016-2018

Structural transformation is slowing down—poor countries that are now agricultural are likely to remain so in the decades ahead

The biggest agricultural challenge of climate change is not food security, but job security; especially in the Horn of Africa and the Sahel

Reducing food loss and waste (SDG 12.3) is good for the environment, but has little impact on global hunger

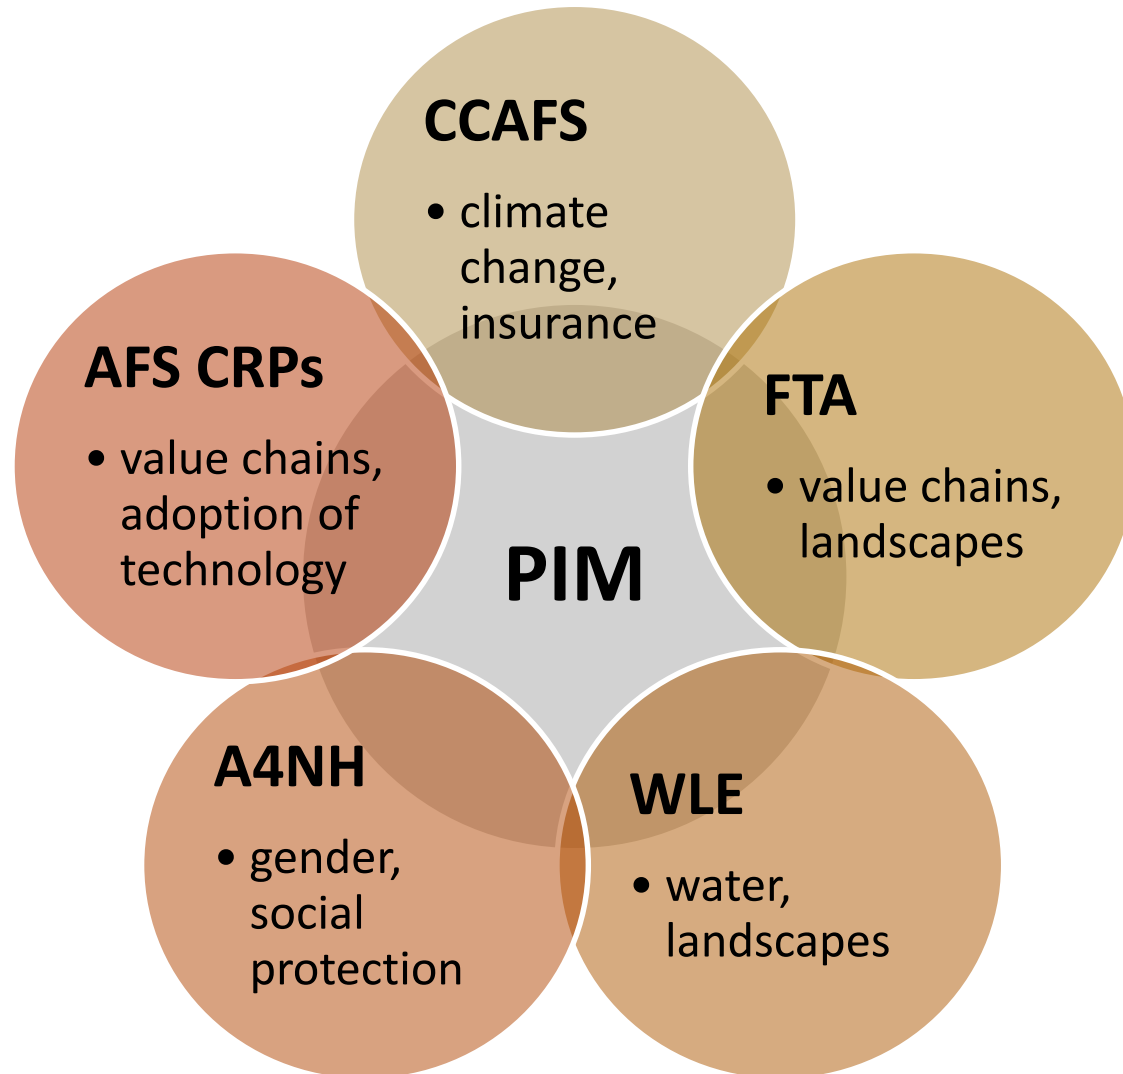

Post-harvest loss in the developing world is a misnomer—loss occurs along a continuum, and much is pre-harvest or during

Social protection boosts household income and food security, but alone is not sufficient to address child malnourishment

Social protection can reduce intimate partner violence

Women own more land than the 1% number often stated. Individual holdings are high, and joint holdings higher still. Security of tenure and rights to use are important, and get less attention than ownership.

Synergies: other CRPs, Dutch organizations

Dutch partners of PIM:

Amsterdam Optimization Modeling Group	Oxfam Novib
Royal Tropical Institute	UTZ Certified
Wageningen University and Research Centre	Amsterdam Institute for Global Health and Development
Netherlands Development Organisation	Amsterdam Centre for World Food Studies

Climate change is a youth issue

Figure 4: Agriculture share of GDP in 2016 vs. youth as a percentage of the population (2030)

Figure 5: Change in agricultural revenue due to climate change vs. youth as a percentage of the population (2030)
